Priti Mathur
ZForm

Dear Ms. Mathur,

Subject: Application — Back-End Developer

I understand the July 15 deadline has passed, and I am writing in the hope that the Back-End Developer position may still be open. ZForm's mission to build the best business-to-government interface in the world resonates strongly with me, and the role is an excellent match for my skills.

As a recent computer engineering graduate with hands-on back-end experience, I have spent the past year and a half building production software at Beehive Entreprises. There, I designed and delivered REST APIs in Node.js and Python, handled JSON payloads, authentication and error logging, and owned back-end sprint delivery end to end — from feature implementation and code review to deployment on Kubernetes with a full CI/CD pipeline (Jenkins + ArgoCD). This mirrors closely what you are looking for: API development, error/reporting functions, server setup, and shipping builds.

- **APIs & Backend:** built REST APIs with FastAPI and Node.js, handling JSON payloads, JWT auth, error logging and PostgreSQL databases across multiple client projects.

- **AI-Supported Development:** daily use of LLMs, RAG pipelines, AI code generation and prompt engineering — from a RAG chatbot over 900K records to multi-agent architectures. Comfortable with AI prompts across both prototyping and production.

- **Deployment & DevOps:** Docker, Kubernetes, Jenkins + ArgoCD (GitOps), GitHub Actions CI/CD, Prometheus/Grafana monitoring — deployed a full production cluster (3 masters + 2 workers) with zero-downtime rolling updates.

- **Ownership & Sprint Delivery:** technical lead of a 4-person team at ENIT, ran sprint planning, code reviews and deployments on a project ranked 1st. Equally comfortable in a strategic planning meeting and on a launch day.

I am particularly drawn to ZForm's transition toward AI-supported development and your focus on user-friendly GovTech tools. I share your commitment to detail and user experience, and I would be glad to step in and support your back-end needs, including during your engineer's maternity leave.

Thank you for considering my application. I would welcome the opportunity to discuss how I can contribute to ZForm.

Best regards,

Baha Eddine Belhaj Mouldi
