Dear Vneuron Recruitment Team,

Subject: Application for the Cyber Security Analyst Position

I am writing to express my strong interest in the Cyber Security Analyst position in Tunis. I recently graduated as a Computer Engineering Engineer from ENIT, with practical experience in cybersecurity monitoring, threat detection, vulnerability assessment, application security and security automation. During my final-year project at Digital Power Consulting, I developed BeeWAF, an intelligent Web Application Firewall combining 10,041 detection rules, three machine-learning models and 27 security modules, including anti-bot, DLP, anti-DDoS and virtual patching capabilities. The solution also integrated Docker, Kubernetes and ELK-based monitoring and alerting.

I have additional experience in SOC-oriented detection workflows using Elasticsearch, Kibana and Sigma rules, as well as Python-based security automation, Web/API penetration testing and SAP threat monitoring. These experiences allowed me to develop practical skills in log correlation, alert investigation, vulnerability management and incident analysis.

I am particularly interested in Vneuron because this role combines SIEM operations, cloud security, automation and AI-assisted threat detection. I would be motivated to contribute to your security operations while continuing to develop my expertise within your team.

Thank you for considering my application. I would welcome the opportunity to discuss my experience and motivation.
